Meryl®

S k i n l i f e

Meryl® Skinlife

The tests prove it

Meryl® now offering comfort through technical knowledge and an ensured natural balance.

After the sensorial and thermophysiological comfort Meryl® provides the biological comfort.

Meryl® Skinlife is available in full dull microfibers (PA 66 78f68 and PA 66 44f30).

Meryl® Skinlife is perfect for garments which come in contact with the human body.

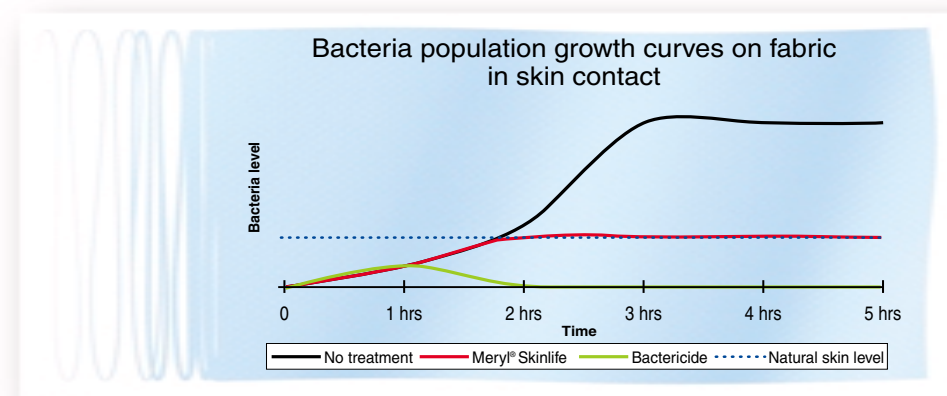

For the Consumer: sportswear, underwear, socks, hosiery, shoe linings.

Other: paramedical fabrics and industrial fabrics (technical fabrics, filters).

Meryl® Skinlife joins the most advanced mix of intelligent polyamide yarns.

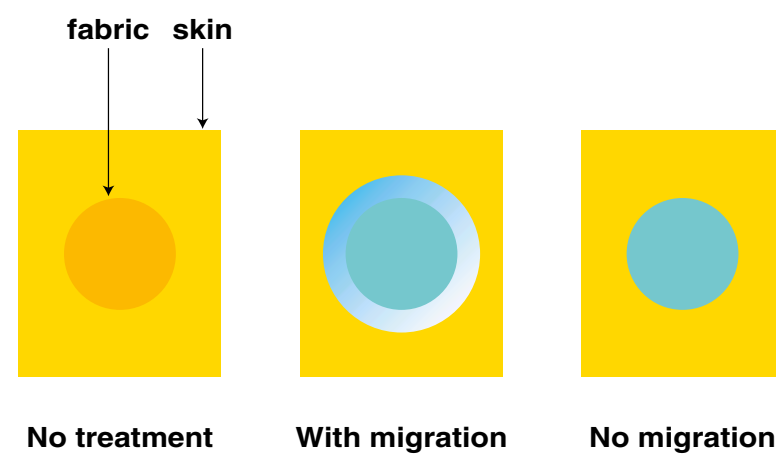

Meryl® Skinlife is bacteriostatic, a fiber which maintains a natural balance on the skin, regardless of activity level.

The human skin normally has a bacteria presence. A high level of bacteria, as well as a complete absence, creates various problems (allergy, odor, illness, etc).

Meryl® Skinlife is not a bactericide: it does not decrease the bacteria level lower than what is normally present on the skin.

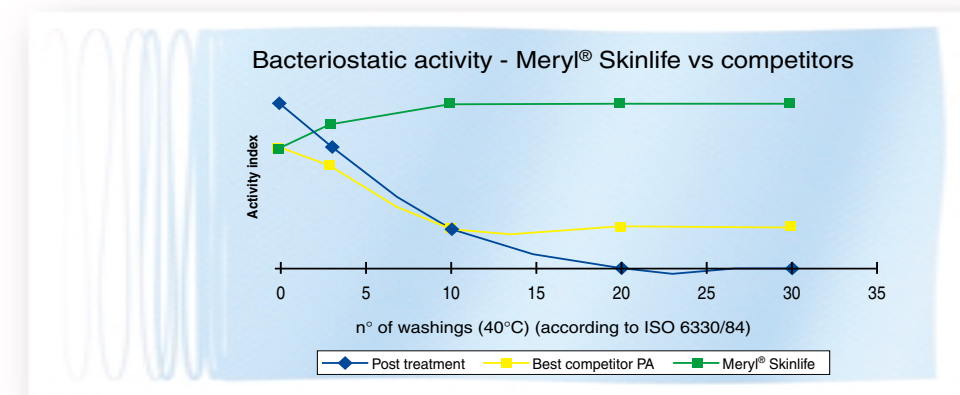

There is no migration from fabric to skin.

According to SNV 195 920/94.

Thanks to the presence of the exclusive bacteriostatic agent in the polymeric matrix (which is *inherent* in the fiber... not deposited on the fabric's surface) there is **no migration** from fabric to skin (avoiding induction of allergy).

Meryl® Skinlife is permanent.

According to the main norms JIS L 1902 / 98, XPG 39010/2000, Shake flask.

Due to the bacteriostatic agent present in the polymeric matrix, Meryl® Skinlife is a permanent feature in your garment (it is present after more than 30 washes, or, to end of the garment's life).

The diagram shows a comparison between Meryl® Skinlife, a surface post-treatment normally available on the market and other kinds of treatment available on nylon filaments.

- Meryl® Skinlife is active against the main bacteria's groups Gram + (*S. Aureus*) and Gram - (*K. Pneumonia*) and its component is registered under EPA - TSCA and ELINCS.
- Meryl® Skinlife has passed successfully oral, skin and eye contact tests.
- Fabric and garment manufacturers will find no difficulties in working with Meryl® Skinlife. Expect the same behaviour as a Meryl® microfibre yarn throughout the stages of industrial processing (dyeability, running, etc).
- With the same characteristics and advantages of a Meryl® microfibre yarn - comfort, an incredibly soft touch and high performance - this product has been developed to answer the consumers' demand for quality, durability and practicality regardless of situation.

ONLY GARMENTS WITH THE LABEL MERYL® SKINLIFE HAVE THEIR QUALITY ASSURED.
